Line 10, Other income: The income in 2013 was from the American Conference on Neutron Scattering held June 24-28, 2012 in Washington, D.C. This conference is partially supported by donations from the national labs and by a registration fee paid by participants. The purpose of the conference is educational, for scientists and students who use neutron scattering techniques to share scientific information and advance the field.

Line 17a "Facts and circumstances":

1. The Neutron Scattering Society of America was formed to stimulate, promote and broaden the use of neutron scattering in science, engineering, and technology. This research involves scientists and students from universities, national laboratories, and industry, and most of the results are broadly disseminated to the scientific community in professional journals and at conferences and workshops. Since the research requires large scale government funded neutron facilities, the national labs play a major role in bulding and maintaining neutron scattering in the US. The main sources of funding for the NSSA for the national laboratories, who provide funds to hep support our activities, in particular our biannual American Conference on Neutron Scattering. The $25,000 in public support in 2010 was such a donation by the national laboratories toward the cost of the 2010 ACNS conference. The other income listed in line 10 is additional revenue from the ACNS conference in 2008, the International Conference on Neutron Scattering held in Knoxville, TN in 2010, and the ACNS conference in 2012. The donations from the national labs, plus the registration fees paid by attendees, minus the cost to run the conferences, in some cases produce additional support for the NSSA. In other cases, such as the 2010 ACNS conference, no net income was generated. Thus the NSSA income is a sum of contributions from the national labs directly, or income that comes from sponsored conferences that are supported by registration fees and national lab donations.

2. The governing body (executive committee) of the NSSA broadly represents the neutron scattering community, including scientists from academia, industry and national labs, in order to maintain a global leadership position in this area of research. The results have broad applications to a wide range of technologies, from polymers to complex fluids such as oil for energy, solar energy production, advanced electronics, energy storage in fuel cells and batteries, etc., all of which have a major beneficial impact on the public.

3. The NSSA is a membership organization that is open to all parties who are interested in neutron scattering research and its applications. There are no dues or initiation fees to become a member, an espcially attractive feature for students. The activities of the organization appeal to scientists with interest in neutron scattering techniques or the many area of chemistry, physics, materials science, and engineering that can be explored with these techniques at the government facilities maintained for this purpose.
